

We Built Wells in Africa!

Water is the one thing we all need to survive. And sadly, these two villages in Cameroon don't have reliable access to it. So, we partnered with the charity to dig two wells, and I sent Darren and the team over to help.

We are building two separate wells that will each produce 10,000 liters of water per day. Our first one will go down to 180 feet and our second one will go down to 270 feet. These steps will give our wells plenty of access to clean drinking water.

These wells are going to serve between nine and 12,000, people, which means that each person is going to get at least two liters of clean drinking water a day.

When we arrived, we immediately started working with the team to get the first well built. This is the stream that people have to come and get water from every day. The river water is polluted and full of parasites, and people often end up in the hospital because of this unfiltered water. There are many problems caused by not having good drinking water, including roiling stomachs and typhoid.

Both of these wells will literally save lives, but there's so much more to get done. The second well is even harder to build because it is almost two times as deep to get the same amount of water. However, the team is determined to help the people of Cameroon without these wells and access to clean water.

The lack of good drinking water affects not only the health of the people but also their education. Some students attend classes and some escape from classes because of the lack of good drinking water. The team is also looking for sponsorship to build more wells in the future. And having said that,

Dragon City is a free-to-play mobile game available on iOS and Android. Basically, you can collect thousands of dragons and build your own empire. And this month they're celebrating their 10th anniversary. And the coolest part is they're bringing back all four MrBeast dragons for it. the MrBeast dragon the Beast Gamer Dragon the Beast Mode Dragon the Super Beast Dragon they're all coming back. Why isn't there a Darren dragon? No one's ever asked for one. You can even have your dragons make babies and train them to be stronger it's easy to get hooked on this game and I've already spent hours playing it. And if you'd like to support Beast Philanthropy and help us build more wells in the future click the link in description and download the game. You can also download Dragon City right now by scanning the QR code in Jimmy's face. It's actually on your face you don't have putting images on people's faces privileges. You'll get in-game rewards like 30 000 gold, 10 gems and 15 000 food. If you download the game in the next seven days you get a free game. We get to build more wells, it's a win-win. Click the link down in the description. And thank you dragon city for helping us build more wells.

Fresh water isn't just important for survival, but it's also necessary to stay clean and healthy. During the COVID pandemic, it was even more important to wash hands, but the lack of good drinking water made this difficult.

The team's hard work and the anticipation of the community finally paid off when they struck water. The community was overjoyed and celebrated the arrival of the team with plays, dances, and speeches. The president of Cameroon even sent pieces of clothing to show his appreciation.

Having access to clean drinking water is something that people in Cameroon take very seriously. They say that water is life and everything. The two wells will produce 7.5 million liters of water per year. And having said that,

The success of the project is not just due to the team and Darren but also due to the support of those who watch the video. By watching the video, people are helping to pay for more wells in the future.

What is the main objective of the project in Cameroon?

- A. To produce clean drinking water
